FLOWSEAL ACTUATOR OPTIONS:

Lever: • Not recommended for Metal Seat
• High Performance Butterfly Valve

Worm Gear Operators: **Five types available:**
• High temperature service
• Buried service
• Submersible service
• Marine service
• Standard aluminum handwheel

Optional:

- Chain wheel
- Output shaft extension
- Input shaft extension
- Military special operator
- AWWA special operator

Hydraulic Actuator:

- Customer specified hydraulic actuator

Pneumatic Actuators:

- Crane Revo® spring return pneumatic actuator
- Crane Revo® double acting pneumatic actuator
- Customer specified pneumatic actuator

Electric Actuators:

- Series 44000 electric actuator
- Customer specified electric actuator

Note¹ Shaft materials other than 17-4 PH or Monel® will affect working pressure ratings. Please consult factory.

Note² DDES = Double Dead End Service.

Note³ For CE marked valves, see Body Rating chart on page 18, as temp ranges can vary per material.

Note⁴ Viton® O-Ring is recommended for use in Hydrocarbon and NACE service.

Note⁵ RTFE/Silicone combination is not to be used with "NACE" valves.

Viton® is a registered trademark of DuPont Performance Elastomers L.L.C.
Hastelloy C® is a registered trademark of Haynes International, Inc.
Monel® and Inconel® is a registered trademark of Special Metals Corporation

NOTES:

1. General

- Standard valves tested to MSS SP-61. API 598 testing available on request.
- Dimensions shown are for reference only. Certified drawings available on application.

2. For 2" through 24" sizes:

- Face-to-face dimensions (C) meet, within specified tolerance, MSS SP-68 and API 609 requirements.
- Valves are designed for installation between ASME B16.5 flanges.

3. For 30" through 48" sizes:

- Valves are designed for installation between ASME B16.47 Class A flanges. (Class B on request)

Pressure/Temperature Ratings **Soft Seat**

As temperature increases, the pressure retaining capability of materials decreases. The graph below illustrates the pressure/temperature ratings of the Flowseal ASME Class 150, Class 300, and Class 600.

The heavy lines define the ratings of the carbon steel and stainless steel valve body (or "shell") in conformance to ASME B16.34. The shaded areas define the ratings of the TFE and RTFE Seat materials.

Seat ratings are based on differential pressure with the disc in the fully closed position.*

Steam Service

TFE seated valves are rated for 50 psi saturated steam.

Valves with "O" seat configuration (RTFE seat / AFLAS O-ring) are rated to 100 psi steam service.

ASME B16.34 Body and Flowseal Soft Seat Pressure - Temperature Ratings

*Shaft materials other than 17-4 PH or Monel® will affect working pressure ratings. Please consult factory.

Valve Flow Coefficients

C_v (Coefficient of Volume) is the number of U.S. gallons per minute of water required to pass through a valve with a pressure drop of 1 psi. The chart below records this C_v factor for the Flowseal valve classes and sizes at ten degree increments between open and closed. The values shown are for the valve installed in the seat upstream ("SUS") position.

Degree Open % Full C_v	10° 1.5%	20° 6%	30° 14%	40° 25.2%	50° 38%	60° 55%	70° 75%	80° 97%	90° 100%

Torques shown are for on/off applications and include sizing margins appropriate to normal liquid and gas applications. For severe services, or unusual fluids or slurries, consult factory.

II. HYDRODYNAMIC TORQUE VALUES

The chart below provides a C_t (Torque Coefficient) factor to aim in actuator sizing. The C_t factors are based on water at ambient temperature, and do not take in to account other factors such as: cavitation, flashing, noise, vibration, etc. These considerations should be addressed prior to hydrodynamic torque sizing.

The equation for hydrodynamic torque is:

$$T_d = C_t \times \Delta P$$

ΔP = Pressure Drop in PSIG
 C_t = Torque Coefficient Factor
 T_d = Dynamic Torque in Inch Pounds

Body & Components Pressure/Temperature Ratings

BODY RATING

The charts below reflect the pressure/temperature ratings for carbon steel and stainless steel valves, in accordance with ASME B16.34. The hydrostatic shell test is performed on the body at 150% of the cold working pressure (C.W.P. is defined as the pressure rating between -20 to 100°F [-28°C to 37°C]) and the hydrostatic seat test is performed on the disc and seat at 110% of the cold working pressure.

COMPONENTS RATING

The chart at right reflects the maximum temperature ratings for individual components of the Flowseal HPBV.

Special care should be taken when specifying component materials for valves at elevated temperatures, especially metal seat valves.

Consult factory if additional information is required regarding the suitability of components for specific pressure/temperature applications.

Description & Material	Temperature	
	°F	°C
Seat Seal (Soft Seated)		
TFE	-100 to 400	-73 to 204

* Bolt lengths "A" & "B" are from face of valve body to minimum depth in lug. Flange & gasket thickness must be added to calculate minimum bolt length.

** Special length required for tapped blind holes on either side of the valve shaft at the top and bottom ends of the valve body.
